Patch Management

With Ivanti Security Controls

Patch management is critical to organizations that want to stay secure. The never-ending task is resource intensive and often left incomplete. Avoid a data breach due to known exploitable vulnerabilities and missing patches with Cygilant SOCVue Patch Management.

Cygilant SOCVue Patch Management service delivers world-class patching technology along with guidance to implement an effective patch management program. Choose Cygilant SOCVue Patch Management as a service and get a 24x7 SOC and a Cygilant Cybersecurity Advisor (CSA) that has your back. Included with the service is a subscription to Ivanti Security Controls Patch Management.

Benefits of SOCVue Patch Management

- Agent-based or agentless scanning and patching
- Installation assistance and technical support by your Cygilant CSA and Ivanti
- Ivanti Security Controls interface for dashboards and reporting
- Large third party application patch repository to cover popular business applications
- Flexibility to automate patching or deploy updates on-demand
- Monthly review with your Cygilant CSA covering the system health and your patch management program goals

Features

- Access to an industry-leading library of vendor patches
- OS support includes Windows, RHEL and CentOS
- Browser support includes IE, Edge, Firefox and Chrome
- Application support includes Adobe, MS Office, VMWare and many more
- Reporting – Standard reports including executive summary and detailed reports by patch and by machine, advanced filtering and scheduling options and support for multiple export formats

Patch Management

How it Works

Your Cygilant Cybersecurity Advisory and SOC team assists with installation of Ivanti Security Controls Patch Management server and agents. You will agree with the team how often systems are scanned for patches and cadence for updates. Monthly meetings with your Cybersecurity Advisor provide the team with opportunities to review remediation progress as well as upcoming, planned system changes.

About Ivanti Security Controls

Cygilant partners with best-of-breed vendors following years of experience helping organizations of all sizes secure their systems. The partnership with Ivanti combines a leading cybersecurity-as-a-service with the leading, single automated patching solution that spans not only physical and virtual Windows servers but workstations as well.

- **Patch virtual servers.** Find online and offline workstations and servers, scan for missing patches, and deploy them. Then patch everything from the OS and apps to virtual machines (VMs) and even the ESXi hypervisor with the product's deep integration with VMware.
- **Patch without an agent.** Agentless technology allows your Cygilant team to assess and deploy patches to the workstations and servers connected to your network while minimizing the impact on both your team and system workloads.
- **Patch Windows and Linux machines.** Ivanti can handle today's heterogeneous environments including patching for Windows and Linux.
- **Patch applications.** Ivanti Security Controls will patch third-party applications such as Adobe Acrobat Flash and Reader, Google Chrome, Mozilla Firefox, and Oracle Java.
