THE COMBINED POWER OF MODERN SOC-AS-A-SERVICE AND MODERN SIEM

Security monitoring is a critical element of an organization's cybersecurity protection. Cygilant and LogPoint have partnered to combine the power of modern SIEM technology with Cygilant's modern Cybersecurity-as-a-Service.

LogPoint helps manage and analyze data so businesses can better detect threats. LogPoint is a market-leading security information and event management (SIEM) solution.

With advanced analytics and automation based on machine learning (ML), LogPoint supports businesses in cybersecurity, compliance, IT operations and business analytics.

HUNT, DETECT & RESPOND. FASTER.

Why Cygilant and LogPoint

The matching of LogPoint with Cygilant takes the security monitoring process a step further. Cygilant CSAs review incidents and alerts with an organization's needs in mind and then prioritize that information before sharing actionable counsel. This ensures that the customer is rapidly given important information and actions – but is not overwhelmed by receiving alerts or data without a clear guide to what needs to be acted on.

Why Cygilant Partners with LogPoint

Fast Detection

Make better-informed decisions fast with LogPoint's UEBA. Powered by machine learning, UEBA helps identify abnormal behavior and insider threats.

Predictable Costs

Based on the number of nodes, true predictable pricing gives you a total cost of ownership with no surprises. Get peace-of-mind that pricing won't change due to increasing data loads.

Time To Value

Get up-and-running faster than any other SIEM solution. Get results within days from out-of-the-box integration and predefined uses cases, dashboards and reports.

Data Privacy

Maintain GDPR, CCPA and other regulatory compliance with features for data-privacy. Analysts can investigate and act on incidents without seeing the underlying data, protecting personal information.
